Regional Manager
IT DEPARTMENT

Subject: **Summary of Accomplishments for Regularization / Full Status**

Greeting of Peace,

Since assuming as a Branch Manager within the IT Department, I have remained dedicated to upholding high standards in system performance, data integrity, and operational efficiency. My focus has been on ensuring that all IT processes and support services are delivered with accuracy, reliability, and a proactive approach to system management and optimization.

SYSTEM DEVELOPMENT & IMPROVEMENTS:

- Successfully enhanced the payroll system frontend using React (Vite) and backend using Node.js/Express
- Implemented JWT-based authentication with role normalization and secure API access
- Configured axios interceptors for automatic token handling and session management

ROLE-BASED ACCESS CONTROL:

- Implemented and refined role permissions for:
    - Admin (full access)
    - HR and Accounting (edit payroll, bonus management)
    - Branch Manager (view-only, add staff without approval rights)
    - Area Manager, Regional Manager, AVP (create and view specific transactions without approval rights)
- Restricted approval actions (Approve/Reject/Delete) to Admin level in backend validation

APPROVAL WORKFLOWS:

- Developed multi-level approval processes for:
    - Leave Requests (Area Manager → Regional Manager → AVP → Admin)
    - Resignation Requests with attachment support
    - Loan Requests with file upload and downloadable signed documents
- Ensured proper visibility of attachments based on role hierarchy

PAYROLL & BONUS MODULE:

- Updated bonus computation logic:
    - Adjusted 15th month computation based on 2025 13th month release requirement
    - Integrated editable percentage and release tracking
- Improved payroll display and removed decimal inconsistencies (.5 issues)
- Linked salary and position with System Rates for automatic updates

DATABASE & MIGRATIONS:

- Created and updated multiple PostgreSQL migrations:
    - Loan request attachments (approved attachment path, etc.)
    - Suspension orders (type and attachment fields)
    - Status and approval tracking fields
- Fixed migration errors and ensured schema consistency

STAFF MANAGEMENT:

- Enhanced Staff Information module:
    - Added dropdown for positions based on System Rates
    - Improved UI for editing staff details and balances
- Implemented searchable dropdowns for employee selection across modules

BUG FIXES & OPTIMIZATION:

- Resolved access denied issues for Regional Manager after approvals
- Fixed issues with file upload handling and visibility
- Debugged leave request routing and approval chain errors
- Improved synchronization between Personal Balances and Schedule Balances

UI/UX ENHANCEMENTS:

- Improved layout and usability across modules:
    - Added scrollbars for better visibility of long tables
    - Adjusted button sizes and layout consistency
    - Enhanced table filtering and search functionality

DEPLOYMENT & CONFIGURATION:

- Configured Docker environment for frontend, backend, and PostgreSQL
- Set up Nginx reverse proxy for API and uploads
- Implemented environment-based API configuration using VITE_API_URL

CHALLENGES ENCOUNTERED:

- Complex role-based permission conflicts across multiple modules
- Migration errors due to missing columns and schema inconsistencies
- Data synchronization issues between related tables (staff balances, schedule balances)
- UI limitations in handling large datasets

ACTIONS TAKEN:

- Standardized role validation using middleware (requireAuth and requireRole)
- Rewrote and corrected migration scripts to ensure proper execution
- Improved database queries and relationships for better data consistency
- Enhanced frontend components for better usability and performance

CONCLUSION:
During the reporting period, significant improvements were made to the HR/Payroll System, particularly in role-based access control, approval workflows, and payroll computations. System stability, usability, and functionality were enhanced, contributing to a more efficient and reliable platform.

Respectfully submitted by,

Emmanuel Concepcion Ponce
Acting Branch Manager
IT Department
