AmberCash LMS

Loan Application Flow (LAF) System

QA Test Guide — Phases 1 to 7

May 2026 · For QA Team Use Only

This document provides step-by-step test cases for the AmberCash LAF digital application system, covering QR code generation, the public loan application form, offline field mode, credit investigation, duplicate detection, client promotion, and biometric disbursement. No technical knowledge is required to use this guide.

How to Use This Guide

Each phase maps to a real workflow in AmberCash LMS. Follow the steps in order within each phase. Tick off each numbered step as you go. If a result does not match the expected outcome listed in the green "Expected Results" table at the end of each section, mark it as a defect.

> *You do not need a developer account or technical access. All steps use the normal LMS interface exactly as end users would.*

Symbols Used

- ✓ Expected result — what should happen
- ✗ Failure — what should NOT happen
- ⚠️ Warning or important note — pay close attention
- ℹ️ Tip — helpful context

Test Accounts Needed

Set up the following accounts in the test environment before beginning:

Role	Username / Email	Access Level	Used In
Admin (rep=1)	admin@ambercash.ph	Full system access	Phases 1, 5, 7
Branch Manager (rep=3)	bm@ambercash.ph	Branch-level access	Phases 2, 3, 4, 5, 6

Role	Username / Email	Access Level	Used In
Loan Officer (rep=4)	lo@ambercash.ph	Group/client access	Phases 1, 3
CI Investigator	ci@ambercash.ph	CI investigation only	Phase 4
Client (phone)	(no login needed)	Public form via QR	Phases 2, 3

Phase Overview

Phase	Name	Who Performs It
Phase 1	Group QR Code Generation	Admin or Loan Officer
Phase 2	Client Submits LAF via QR	Client (mobile phone)
Phase 3	Offline Mode — Prepare for Field	Loan Officer (mobile)
Phase 4	Credit Investigation (CI)	Branch Manager or CI Officer
Phase 5	Duplicate Client Detection & Admin Validation	Admin + Branch Manager
Phase 6	Promote Client & Create Loan	Branch Manager
Phase 7	Block Loan Without CI	Branch Manager

Phase 1 — Group QR Code Generation

The Loan Officer generates a unique QR code for their group. This QR code is printed or displayed at the meeting, and clients scan it to start their loan application. Each QR code is valid for 7 days.

1A — Generate a New QR Code (Loan Officer)

> *Log in as a Loan Officer (rep=4). Do not use a Branch Manager account for this sub-test.*

1. Log in as Loan Officer
2. Go to Groups from the main menu
3. Find your assigned group in the list — it shows under your name in an accordion panel
4. Click the Generate QR button on the group card
5. A QR modal appears. Verify it shows: Group name, Branch name, and Loan Officer name (none should be blank)
6. A QR code image appears in the modal
7. Click Download to save the QR image
8. Click the copy icon next to the URL — paste it in a browser. It should open the loan application form

1B — QR Expiry Badge

9. On the Groups page, look at the group card you just generated a QR for
10. A green badge shows QR valid · Xd left (e.g. "7d left")
11. Leave it for a few hours — if less than 24 hours remain it should show "Xh" (hours) or "Xm" (minutes) instead of "0d"

1C — Regenerate QR (replace existing)

12. Open the QR modal for a group that already has a QR
13. Click the Regenerate button
14. The old QR link should no longer open the form — it becomes invalid
15. The new QR link opens the form correctly

1D — Permissions Check

16. Log in as a Branch Manager (rep=3)
17. Go to Groups — find a group assigned to a different Loan Officer
18. Try to click Generate QR on that group
19. An error message appears: "You can only generate QR for your own group"

Expected Results — Phase 1

What to Check	Expected Result
QR modal shows correct group/branch/LO names	✓ All three fields populated, no blank labels
QR badge shows time correctly	✓ "Xd", "Xh", or "Xm" — never shows "0d" when time remains
QR link opens LAF form	✓ Correct form page loads on phone or browser
Regenerate invalidates old QR	✓ Old URL shows an expired/invalid error
LO cannot generate QR for another LO group	✓ Error message shown, QR not generated

Phase 2 — Client Submits LAF via QR

A client scans the group QR code and fills in the public Loan Application Form on their phone. No login is required. The form collects personal details, a photo, government ID, loan information, and optionally biometric registration.

2A — New Prospect Client

> *Use a real mobile phone with a camera. Open the QR code image and scan it with the phone camera.*

20. Scan the group QR code with a mobile phone camera
21. The form opens in the phone browser — no login or app download needed
22. On Step 1 (Type), tap New Prospect and tap Next
23. On the Photo step: tap Take Photo. The phone camera opens. Take a clear photo of the applicant
24. The photo preview appears — confirm it looks correct
25. On the Personal Info step: fill in First Name, Last Name, Middle Name, Birthdate, Contact Number
26. On the Address step: fill in all address fields
27. On the Government ID step: select an ID type from the dropdown and enter the ID number

28. Upload or take a photo of the ID
29. On the Loan step: enter Loan Amount, Purpose, and Guarantor details
30. If the Biometric step appears: follow the on-screen prompt to register fingerprint or Face ID
31. Tap Submit Application
32. A success screen appears with a CI Reference Code (e.g. LAF-B001-20260524-XXXXX). Write this down
33. The success screen also shows a QR code for this specific application — tap Download to save it

2B — Existing Client (Reloan)

34. Scan the QR code on a phone and open the form
35. Tap Reloan and tap Next
36. Enter the existing member's Last Name and Slot Number — tap Lookup
37. The form shows the existing client's details: name, contact, address, and current photo
38. Review the Confirm Your Details step. If the member's contact or address has changed, type the new value in the editable field (leave blank if unchanged)
39. Complete the photo, ID, and loan steps
40. Submit — success screen appears

2C — Prepare for Field (Online → Offline)

41. While online, open the group QR link on the phone
42. A blue banner appears at the top: "Going to the field?" — tap Prepare for Field
43. A green banner replaces it: "N members cached — offline lookup ready"
44. Turn off WiFi and mobile data on the phone
45. A red Offline Mode banner appears — this is expected
46. Tap Reloan — enter a member's last name and slot number — tap Lookup
47. The member details load from the cached data — no internet needed
48. Try to select Balik Client — it should appear greyed out with "Online only" label
49. Complete a Prospect application offline — tap Submit. An amber confirmation modal appears
50. Confirm — the application is saved to the device queue
51. Turn WiFi back on — a sync banner appears. Tap Sync Now
52. Toast shows "1 application synced"

2D — Duplicate Government ID

53. Submit a complete LAF with a government ID number
54. Try to submit a second LAF with the exact same ID number for a different name
55. On the ID step: a red error appears: "This [ID type] ID is already in use" — form cannot proceed
56. Submit should be blocked

Expected Results — Phase 2

What to Check	Expected Result
Form opens from QR — no login needed	✓ Form loads in phone browser without asking for username/password
Prospect flow completes	✓ Success screen with CI Reference Code appears

What to Check	Expected Result
Reloan lookup finds existing member	✓ Member details pre-fill the form correctly
Editable fields in Confirm step	✓ Last name, middle name, contact, address can be updated; First name and birthdate are read-only
Prepare for Field caches data	✓ Green "N cached" banner appears; offline lookup works without internet
Balik disabled offline	✓ Balik button is greyed out with "Online only" label when no internet
Offline submission queued	✓ Application saved to queue; syncs when back online
Duplicate ID blocked	✓ Red error on ID step; form cannot be submitted with a duplicate government ID

Phase 3 — Offline Mode Details

This phase tests the full offline caching lifecycle — including cache expiry, the sync-clears-cache behaviour, and preventing the same client from being queued twice.

3A — Cache Expiry (24 Hours)

57. Open the LAF form on a phone and tap Prepare for Field
58. Note the expiry time shown in the green banner (e.g. "expires 10:30 PM")
59. After 24 hours, open the form again — the blue "Prepare for Field" banner reappears, indicating the cache expired and must be refreshed

> *You do not need to wait 24 hours during testing — the QA lead can confirm this by checking the timestamp in the green banner.*

3B — Sync Clears Cache

60. Cache the group members (tap Prepare for Field while online)
61. Go offline and submit at least one Prospect application
62. Go back online — tap Sync Now in the sync banner
63. After sync completes: the green "N cached" banner disappears and the blue "Prepare for Field" banner reappears
64. This means the cache was cleared after sync — the LO must re-cache before the next field visit

3C — Prevent Duplicate Offline Submissions

65. Cache members and go offline
66. Look up an existing member (Reloan) and submit their application — it queues successfully
67. Try to look up and submit the same member again
68. An error appears: "[Name] already has a pending application in the queue. Sync first before submitting another"

Expected Results — Phase 3

What to Check	Expected Result
Cache expires after 24h	✓ Blue "Prepare for Field" banner reappears after cache expires
Sync clears cache	✓ Green cached banner disappears after successful sync
Same existing client blocked twice	✓ Error toast prevents submitting the same reloan client twice offline

Phase 4 — Credit Investigation (CI)

After a client submits a LAF, a Credit Investigator visits the client in the field to verify their details. The CI page shows all pending applications and allows investigators to record findings and approve or decline.

4A — View Applications in CI List

69. Log in as Branch Manager or CI Officer
70. Go to Transactions → CI Investigation
71. The list shows all pending LAF applications
72. Each card shows: applicant name, CI reference code, branch, and a colour-coded pill showing the client type
    - *Green pill = New (Prospect)*
    - *Blue pill = Reloan*
    - *Purple pill = Pending Member*
    - *Orange pill = Balik*
73. Click any application — the right panel shows full applicant details

4B — Applicant Card for Existing Clients

74. Select a Reloan or Pending Member application from the list
75. The applicant card on the right shows a Loan History section below the applicant details
76. Verify each loan cycle card shows: Cycle number, Amount Released, Balance, Number of Payments made vs Total, Status
77. If the client is currently delinquent: the latest loan card has a red background and shows "⛔ Delinquent"
78. If the client has missed payments: an amber card shows "⚠️ X missed"
79. If the client has changes reported on their Confirm step (e.g. new last name): an amber section appears titled "Member reported changes — verify during visit"

4C — Conduct Investigation (Online)

80. Select an application from the list
81. Fill in the investigation findings in the form on the right
82. Check the verification boxes as applicable (address verified, business verified)
83. Take a selfie with the client using the selfie capture section
84. Select Approve or Decline
85. Click Save Investigation
86. The application status changes to CI Approved or CI Declined in the list

4D — Offline Field Investigation

87. While online, click Prepare for Field Work at the top of the CI page
88. A modal shows all pending applications. Select the ones you will visit
89. Click Cache & Go
90. Turn off WiFi and mobile data
91. The CI page still loads and shows the cached applications
92. Select an application — the details load from cache
93. Complete the investigation form and tap Save Draft (Offline)
94. Turn WiFi back on — a sync banner appears
95. Tap Sync Now — all offline drafts are uploaded
96. Verify in the list that statuses changed to CI Approved / CI Declined

4E — No Cache, Go Offline

97. Without clicking Prepare for Field Work first, turn off internet
98. Open the CI Investigation page
99. A full-screen message appears: "No Cached Data — go online and use Prepare for Field Work before visiting clients"
100. The investigation form is not accessible

Expected Results — Phase 4

What to Check	Expected Result
Client type pill visible in list	✓ Colour-coded pill shows New / Reloan / Pending / Balik on each card
Loan history shows for existing clients	✓ Cycle cards with amount, balance, payments, delinquent status
Reported changes highlighted	✓ Amber section shows member-reported name/contact/address changes
Online CI saves correctly	✓ Status changes to CI Approved or CI Declined after saving
Offline investigation saves as draft	✓ Draft badge appears; data syncs when back online
No cache blocks offline access	✓ Full-screen message prevents investigation without cached data

Phase 5 — Duplicate Client Detection & Admin Validation

When a new Prospect client submits a LAF, the system checks if their name or government ID matches an existing client. If a potential duplicate is detected, the application is flagged and requires an Admin (rep=1) to approve or decline it before the Branch Manager can proceed.

5A — Trigger a Duplicate Flag

101. Find an existing active client in the system. Note their first name, last name, and birthdate
102. Submit a new Prospect LAF (Phase 2 steps) using the same first and last name
103. The application submits successfully — the success screen appears
104. Log in as Branch Manager → go to the Temporary Loan Applications tab

105. The new application appears with a status of "Pending Admin Validation"
106. Open the application — an amber section shows: "⚠ Possible duplicate — requires admin validation"
107. The Promote button is not available for this application

5B — Admin Approves (Not a Duplicate)

108. Log in as Admin (rep=1)
109. Go to the Temporary Loan Applications tab
110. Open the flagged application — a Duplicate Validation panel appears
111. The panel shows the potential duplicate candidates with their details
112. Compare the submitted applicant's details with the candidates
113. If they are different people: click Approve (Not a Duplicate) and optionally add a note
114. Status changes to CI Approved
115. Log back in as Branch Manager — the Promote button is now available

5C — Admin Declines (Is a Duplicate)

116. Open a flagged application as Admin
117. If the submitted applicant appears to already have a record: click Decline
118. Status changes to CI Declined
119. The application is closed — no client record is created
120. Log in as Branch Manager — the Promote button does not appear for declined applications
121. The original existing client record is not affected in any way

5D — Non-Admin Cannot Validate

122. Log in as Branch Manager
123. Open a "Pending Admin Validation" application
124. The duplicate panel shows but the Approve and Decline buttons are NOT visible
125. A message reads: "Waiting for a system administrator to validate this application"

Expected Results — Phase 5

What to Check	Expected Result
Duplicate name triggers Pending Validation	✓ Status = "Pending Admin Validation"; Promote button hidden for BM
Admin can approve	✓ Status changes to CI Approved; BM can now promote
Admin can decline	✓ Status changes to CI Declined; no client record created
Existing client unaffected	✓ The original client record remains unchanged after decline
BM cannot validate	✓ Approve/Decline buttons hidden; waiting message shown

Phase 6 — Promote Client & Create Loan

After CI approval, the Branch Manager promotes the application. For new clients (Prospect), this creates a new client record and opens the Add Client form pre-filled. For existing clients (Reloan, Pending, Balik), the system updates their existing record and sends the BM directly to create the loan.

6A — Promote a New (Prospect) Client

> *The CI status for this application must be "CI Approved" before the Promote button appears.*

126. Log in as Branch Manager
127. Go to the Clients section → Add Client
128. A search panel appears — enter the CI Reference Code from the approved application
129. The client form pre-fills automatically with all details from the application: name, address, contact, photo, government ID, and biometric (if registered)
130. Review the pre-filled data for accuracy
131. Click Save Client
132. The client record is created — verify it appears in the Clients list
133. The application status changes to Promoted in the Temporary Loan Applications tab

6B — Promote an Existing Client (Reloan/Pending)

134. Use a CI Reference Code from an approved Reloan application
135. Go to Add Client and enter the CI code
136. Instead of opening the Add Client form, a toast appears: "Member record updated from LAF. Redirecting to Add Loan…"
137. The system navigates directly to the Add Loan page with the client pre-selected
138. If the client had changes reported in their Confirm step (e.g. new last name): verify the change appears on the client's record after promotion

6C — Cannot Promote a Declined Application

139. Try to enter a CI Reference Code that belongs to a CI Declined application
140. An error appears: "Cannot promote — CI must approve first"
141. The form does not pre-fill

Expected Results — Phase 6

What to Check	Expected Result
Prospect: Add Client form pre-fills	✓ All LAF data (name, photo, ID, biometric) appears in the form
Prospect: client saved successfully	✓ New client record created and visible in Clients list
Reloan: direct redirect to Add Loan	✓ "Member record updated" toast + redirect to Add Loan page
Changes applied on promotion	✓ New last name / contact / address visible on client record after promotion
Declined application blocks promote	✓ Error message; form does not pre-fill
Application marked as Promoted	✓ Status = "Promoted" in Temporary Loan Applications tab

Phase 7 — Block Loan Without Approved CI

A loan cannot be created for a client who does not have an approved CI on file. This prevents loans being disbursed to clients who were never formally investigated.

7A — Attempt Loan Without CI

142. Log in as Branch Manager
143. Go to Add Loan
144. Select a client who does not have any CI investigation on record
145. Attempt to fill in the loan form and click Save
146. An error appears: "This client does not have an approved CI on file. A Credit Investigation must be completed before a loan can be created"
147. The loan is not saved

7B — Loan Allowed After CI

148. Complete the CI flow for the same client (Phases 4 and 6)
149. Go back to Add Loan — select the same client
150. The form proceeds normally — no CI error
151. Save the loan — it is created successfully

Expected Results — Phase 7

What to Check	Expected Result
No CI — loan blocked	✓ Error message shown; loan not saved
After CI — loan allowed	✓ Form proceeds without CI error; loan saved successfully

Additional Edge Cases to Test

The following scenarios do not belong to a single phase but should be tested across the full flow.

EC1 — Expired QR Code

152. Ask a developer to temporarily set a QR code's expiry to a past date in the test environment, OR wait for an existing QR to expire after 7 days
153. Scan the expired QR code with a phone
154. The form does not load — an error page shows: "This QR code has expired. Please ask your Loan Officer for a new one"

EC2 — Pending LAF Blocks Second Submission

155. Submit a Reloan LAF for an existing member (Phase 2B)
156. Before the first application is processed, try to submit another Reloan LAF for the same member

157. On the Lookup step: an error appears: "This member already has a loan application pending CI review. Please wait for the current application to be processed"

EC3 — Government ID Already Registered in Pipeline

158. Submit a Prospect LAF with a specific government ID number
159. Before the first application is promoted, submit a second LAF with the same government ID number for a different name
160. On the ID step of the second submission: a red error appears identifying the conflict with the first application's CI reference code

EC4 — SMS Notifications

> *SMS must be enabled in System Settings → Feature Enablement → SMS toggle. The test phone number must be a valid Philippine mobile number.*

161. Submit a LAF with a valid mobile contact number
162. The client's phone receives an SMS confirming the application was received, with the CI Reference Code
163. After CI is approved: the client receives an SMS notification
164. After CI is declined: the client receives an SMS notification
165. After loan disbursement: the client receives an SMS notification

EC5 — Audit Logs

166. Log in as Admin
167. Go to Settings → System → Audit Logs
168. Filter by Category: LAF
169. Verify that events appear for the LAF submissions and CI actions completed during testing

Defect Reporting Guide

When you find something that does not match the expected result, record the following information in the defect tracker:

Field	What to Write
Phase & Section	e.g. "Phase 2 — 2D Duplicate ID"
Steps to Reproduce	Number each step exactly as you did them
Expected Result	Copy from the Expected Results table in this guide
Actual Result	Describe exactly what happened instead (include error messages word for word)
Device & Browser	e.g. "iPhone 15, Safari" or "Chrome 124, Windows 11"
Screenshot	Attach a screenshot of the error or unexpected behaviour
Severity	Critical (blocks the flow) / Major (wrong result) / Minor (cosmetic)

> *If the LAF form cannot be opened at all from the QR code, report immediately as Critical — all phases depend on it.*

— End of Test Guide —
